This document provides additional assistance with wiring your Extron IP Link Pro Control Processor to your device. Different components may require a different wiring scheme than those listed below.

For complete operating instructions, refer to the user's manual for the specific IP Link Pro Control Processor or the documentation supplied by the manufacturer of the controlled device.

For more information on using Global Scripter Modules, refer to the "Guide to Using Scripter Modules" document.

Module Notes

- Unidirectional variable must be set to 'True' if status is not required. Default value is 'False'.
  `Example: InterfaceName.Unidirectional = 'True'`

- connectionCounter variable must be set to the number of queries that will be sent to the device before displaying 'Disconnected' if no response is received. Default value is 15.
  `Example: InterfaceName.connectionCounter = 5`

- If login credentials are required, devicePassword and deviceUsername must be set accordingly. devicePassword and deviceUsername default values are 'converge' and 'clearone' respectively.
  `Example: InterfaceName.devicePassword = 'extron'`

Supported Class and Example

EthernetClass

```
    InterfaceName = ModuleName.EthernetClass('192.168.254.254', 23, Model='Converge Huddle')
```

Control Commands

Format with Qualifier:

```
InterfaceName.Set(Command, Value, {'Qualifier Key': 'Qualifier Value'})
```

Format with Qualifier:

```
InterfaceName.Set(Command, Value)
```

Command **OutputGain**	Value -65 to 20 in steps of 0.5 dB	
Qualifier Key **'Channel'**	Qualifier Value '1' – '2'	

# OutputGain example 	
InterfaceName.Set('OutputGain', 20, {'Channel': '1'})		

Command **OutputMute**	Value 'On'	Value 'Off'
Qualifier Key **'Channel'**	Qualifier Value '1' – '2'	

# OutputMute example 	
InterfaceName.Set('OutputMute', 'On', {'Channel': '1'})		

Command **SpeakerGain**	Value -65 to 20 in steps of 0.5 dB	
Qualifier Key **'Speaker Number'**	Qualifier Value '1' – '2'	

# SpeakerGain example 	
InterfaceName.Set('SpeakerGain', 20, {'Speaker Number': '1'})

Qualifier Key **'Speaker Number'**	Qualifier Value '1' – '2'	

# SpeakerMute example 	
InterfaceName.Set('SpeakerMute', 'On', {'Speaker Number': '1'})		

Status Available

For all commands, call Update to receive the latest status. ConnectionStatus does not support the Update function and is triggered by the device providing a successful response to other Update function calls.

Format with Qualifier:

```
        InterfaceName.Update(Command, {'Qualifier Key': 'Qualifier Value'})
        Value = InterfaceName.ReadStatus(Command, {'Qualifier Key': 'Qualifier Value'})
        InterfaceName.SubscribeStatus(Command, {'Qualifier Key': 'Qualifier Value'},
FeedbackHandler)
        FeedbackHandler will be called only when the specified qualifier gets a new status.
```

Format without Qualifier:

```
        InterfaceName.Update(Command)
        Value = InterfaceName.ReadStatus(Command)
        InterfaceName.SubscribeStatus(Command, None, FeedbackHandler)
        FeedbackHandler will be called when any qualifier gets a new status.
```

Command	Value	Value
ConnectionStatus	'Connected'	'Disconnected'

```
# ConnectionStatus example
Value = InterfaceName.ReadStatus('ConnectionStatus')
InterfaceName.SubscribeStatus('ConnectionStatus', None, FeedbackHandler)
```

Command	Value
FirmwareVersion	'String'

```
# FirmwareVersion example
InterfaceName.Update('FirmwareVersion')
